JUN 28 1982

SUBJECT : PCB Management

Our Safety Unit has reviewed your document which outlines several alternatives for managing PCB disposal.

Obviously, Safety would prefer to have any hazardous material removed immediately especially if it isn't being used. Therefore, we would endorse Option #1 immediate disposal. However, since OSHA, WISHA and EPA allow storage of PCB under prescribed conditions we cannot say it has to be removed immediately and it boils down to a matter of economics which is something the Superintendent will have to decide.

For your information, Safety has gotten feedback from employees who are concerned about being exposed to PCB. The handling of this material requires the added expense of wearing disposable clothing when working with containers that are leaking PCB. Other than the above and the information you already have we cannot offer much more insight on whether to dispose or not dispose immediately.
